

## PN Security Lock Bar

Lock Bars are surface mounted window security hardware designed for ease of factory or retrofit insulation. The window sash is positively secured at 3 ventilation levels by easily located notches. The cranked section of the lock bar prevents the sash opening beyond intended restriction. Disengagement of the lock bar for cleaning or maintenance is done by lifting the bar from its bracket with the window in the fully closed position. The lock bar is designed to accommodate all sash opening angles.
